

Marine Notice Nr. 01/ 2024, 15/01/2024

Subject: “Threats to Shipping in the Red Sea – Operational Security Guidance as per International Shipping Organizations Recommendations”

- Ref. :** (a) Interim Industry Transit Advise, Southern Red Sea and Gulf of Aden, 15th Dec. 2023.
(b) IMO Resolution A.1106(29), REVISED GUIDELINES FOR THE ONBOARD OPERATIONAL USE OF SHIPBORNE AUTOMATIC IDENTIFICATION SYSTEMS (AIS).
(c) CMF Guidance for Shipping Navigating the Southern Red Sea, Issue 01/2023, 23rd Dec. 2023.

To: Ship Owners/Ship Operators/Ship Managers / Company Security Officers/Masters/Deputy Registrars of the Guinea-Bissau International Ships Registry.

Summary: The purpose of this Marine Notice is to inform Owners/Operators/Company Security Officers/Masters and other interested parties of the imminent threat of attacks by armed skiffs, drones, or anti-ship missiles in the Red Sea, Gulf of Aden, and Arabian Sea, and also provide guidance on various issues arising out of the recent attacks to commercial vessels in the Red Sea area, as per international shipping organizations publications and guidelines. G-B I.S.R. vessels transiting the Red Sea, Gulf of Aden, and the Arabian Sea are advised to increase their security level, to conduct a thorough ship and voyage-specific threat and risk assessment, as per BMP5 and to report to the competent operational centers of the region, as deemed necessary.

1. Background – Security Situation for Commercial Vessels in the Red Sea, Gulf of Aden and Arabian Sea

1.1. During December 2023 and January 2024, there has been an increase in attacks, carried out mainly by members of Yemen's rebels against vessels sailing through the Red Sea. These attacks have largely consisted of missile and drone strikes targeting commercial vessels primarily, which the rebels believe to be destined for and/or have departed from Israeli ports or are vessels owned, managed, and/or operated by Israeli entities.

1.2. These events have caused wide-ranging damage, to both individual vessels and the global trade industry as a whole, with oil major shipping companies and carriers recently suspending all shipping operations via the Red Sea, in their avoidance of Red Sea shipping routes. According to industry sources, it is estimated that approximately 12% of global trade and 40% of Asia-Europe trade passes through the Red Sea.

1.3. As at today's date, reports of an increasing number of vessels belonging to major shipping lines have diverted to cross the Cape of Good Hope on Africa's southern tip. Such a diversion adds around 3,000 nautical miles and additional days or even weeks to the sailing times of vessels booked to transit the Suez Canal with significant operational, logistical, and cost implications.

2. Escalating Security Situation at the Red Sea.

2.1. Over the last few weeks, the militia has engaged in threats and attacks on multiple vessels engaged in innocent passage through the Red Sea, Gulf of Aden, and Arabian Sea. On multiple occasions,

Page 1 of 3 Mar. Not. 01/2024

the militia has launched missiles from drones and has demanded ships to turn around and proceed to Houthi-controlled areas of Yemen. Additional guidance mainly on operational and reporting issues is available in reference (c).

2.2. G-B I.S.R. vessels transiting the Red Sea, Gulf of Aden, and Arabian Sea are strongly advised to increase their security level and implement all protective measures in their Ship Security Plan. In addition, G-B I.S.R. flagged vessels should avoid calling ports in Yemen controlled by rebels.

2.3. In line with international shipping organizations' guidance and as per International Maritime Organization (IMO) Resolution A.1106(29) paragraph 22 ([https://wwwcdn.imo.org/localresources/en/OurWork/Safety/Documents/AIS/Resolution%20A.1106\(29\).pdf](https://wwwcdn.imo.org/localresources/en/OurWork/Safety/Documents/AIS/Resolution%20A.1106(29).pdf)), if the master believes that the continual operation of AIS might compromise the safety and security of his/her ship or where security incidents are imminent, the AIS may be switched off. It is noted that limiting AIS data to the mandatory fields and omitting the next port of call is considered by international shipping organizations mostly efficient in operational terms.

3. Basis for Preparedness: Best Management Practices (BMP 5)

3.1. The purpose of the “Best Management Practices to Deter Piracy and Enhance Maritime Security in the Red Sea, Gulf of Aden, Indian Ocean and Arabian Sea” is to help ships plan their voyage and to detect, avoid, deter, delay, and report attacks. Experience has shown application of the recommendations in this publication makes a significant difference to the safety of seafarers.

3.2. The current basis for preparedness in this respect is set by BMP5. Following BMP 5, ships that are planning a passage through the Southern Red Sea and the Gulf of Aden should conduct a thorough ship and voyage-specific threat and risk assessment considering any additional advice by the mentioned operational centers and industry organizations, as well as additional guidance by this Administration. The industry recommendation to use the Maritime Security Transit Corridor (MSTC) remains unchanged in light of the recent attacks.

4. Routing Considerations – Risk Assessments

4.1. Ship owners, operators, managers, and staff should regularly evaluate the risks to their ships, including navigation and collision avoidance, and plan routes accordingly. G-B I.S.R. Administration strongly recommends that vessel owners, characters, operators, and ships Masters continue to carry out pre-voyage threat and risk assessments to consider the latest maritime security information from organizations supporting the voluntary reporting.

5. Reporting to Operational Centers

5.1. The key output from UKMTO (UK Maritime Trade Operations, <https://www.ukmto.org/indian-ocean/about-indian-ocean>) is the maintenance of a coherent Maritime Situational Awareness picture in the Red Sea, Gulf of Aden and Arabian Sea, to inform and support industry, contributing to the safety of the mariner. All G-B I.S.R. vessels are advised to report to the UKMTO and register with the Maritime Security Centre for the Horn of Africa (MSCHOA, <https://on-shore.mschoa.org/>) under industry BMP (Best Management Practices) and take advice from the coalition forces operating in the area. Best Management Practices 5 (BMP5) will continue to provide the necessary guidance for shipping to ensure threat and risk

G-B INTERNATIONAL

INTERNATIONAL SHIPS REGISTRY OF GUINEA-BISSAU

assessments are developed for every voyage to mitigate the risks presented by remaining security threats in the region.

6. Emergency Situations – Contacting Operational Centers

6.1. It is advised to contact MSCHOA before transiting the Western Indian Ocean, the Somali Basin, the Gulf of Aden, the Gulf of Oman, and the Red Sea.

The contact details of MSCHOA are:

Maritime Security Centre – Horn of Africa (MSCHOA)

Email postmaster@mschoa.org

Telephone +44 1923 958545 +44 1923 958700

Fax +44 1923 958520 Website www.mschoa.org

6.2. When transiting the Western Indian Ocean, the Somali Basin, the Gulf of Aden, the Gulf of Oman, and the Red Sea it is advised to register with UKMTO (United Kingdom Maritime Trade Operations, <https://www.ukmto.org/>).
